PROFESSIONAL SUMMARY

B.Tech CSE Graduate (2026, 8.13 CGPA) with hands-on experience in SQL, Excel, and Power BI/Tableau dashboarding for data analysis and business intelligence reporting. Skilled in exploratory data analysis, statistical modeling (regression, time-series forecasting), and Python (pandas, NumPy) for translating large datasets into actionable insights — eager to contribute as a **Data Analyst** driving data-informed decisions.

SKILLS

Data Analysis & BI: SQL, Excel (PivotTables, VLOOKUP/XLOOKUP), Power BI, Tableau, Amazon Athena, EDA, KPI Tracking, Funnel Analysis

Programming & Stats: Python (pandas, NumPy, scikit-learn, matplotlib), Hypothesis Testing, Regression, Time-Series Forecasting

Databases & Cloud: MySQL, AWS (EC2, RDS), Git

EXPERIENCE

Software Developer Intern — Blackbucks Education Feb 2025 – Jun 2025

- Translated business and operational requirements into clear technical specifications, optimizing SQL query structure to reduce data query latency by 30%.
- Extracted, cleaned, and validated data across large database schemas using optimized SQL queries, ensuring data accuracy and usability with zero active deviations.
- Collaborated closely within cross-functional teams to align on requirements, coordinate timelines, and communicate progress and findings clearly to stakeholders.

PROJECTS

MarketMatrix (Python, LSTM, ARIMA, scikit-learn, Flask, MYSQL) Dec 2025 – May 2026

- Performed exploratory data analysis and time-series forecasting on S&P 500 data, benchmarking LSTM, ARIMA, and Linear Regression models to identify the most accurate approach.
- Engineered 14 technical indicators (SMA, EMA, RSI, Momentum, Volatility) as model features for a 60-day forecasting horizon, improving trend interpretability.
- Built an interactive dashboard with 20+ metrics and prediction endpoints to visualize forecasts and support data-driven decision-making.

Fraud Detection & Audit System (Python, XGBoost, Qiskit, FastAPI) Jul 2025 – Nov 2025

- Analyzed 6M+ transaction records using exploratory data analysis and unsupervised anomaly detection to identify key fraud indicators.
- Built an XGBoost classification model achieving 99.2% accuracy, and benchmarked a proof-of-concept Quantum SVM layer (Qiskit) for advanced pattern separation.
- Designed a real-time dashboard to visualize prediction outcomes and support audit and risk decision-making.

Resume Keyword Extractor (Python, NLTK, scikit-learn, PyPDF2, MYSQL) Oct 2025 – Feb 2026

- Built an NLP-based tool for automated resume parsing and skill-gap analysis, using TF-IDF weighting and keyword frequency analysis to quantify candidate-JD alignment.
- Implemented text cleaning, tokenization, and visualization (Word Cloud/Bar Charts) to translate skill-gap data into actionable insights.

CERTIFICATION / AWARD

- Deloitte Data Analytics Job Simulation (Forage)** — Designed interactive Tableau dashboards for productivity and performance analysis.
- Introduction to MS Excel** — Hands-on training in PivotTables, lookup functions, and data analysis techniques.
- AWS Academy Cloud Architecting** — Configured scalable cloud infrastructure solutions using EC2 and RDS.

EDUCATION

B.Tech (CSE), VIT-AP University	CGPA: 8.13	2022 – 2026
Class 12, CBSE – Adarsh Jain School, Delhi	80%	2022
